Lux Elements linear drainage

Leverkusen, 01.02.2022

New shower base formats with visually extended channel cover

In 2022 Lux Elements is expanding the range of shower bases with a "wall-to-wall channel look". The design channel version is now available for many new square and rectangular models from 800 x 800 mm to 1600 x 1000 mm as well as four bathtub replacement shower bases with a length of 1800 mm.

The new Tub-Line V shower bases are factory-sealed hard foam shower bases with built-in and sealed floor channel drain in over 20 standard formats. A simple click system ensures secure fastening of the drain support, which can be ordered separately according to the installation situation. The top-mounted, visible cover rail made of brushed stainless steel is extended over the entire width of the shower base and thus creates a "wall-to-wall look", especially in niches.

Adaptable to the room situation

If the foreseen niche is a couple of centimetres smaller than the shower base, both the hard foam element and the stainless steel components can be shortened to any desired size. The accessories for adapting the cover rail and the tiling aid are already included in the product set.

Proven technology

Like all products with linear drainage from Lux Elements, the floor channel drain in the version with the extended cover rail is also height adjustable

and can thus be adapted optimally to the covering thickness.

Also available as a bathtub replacement system

In addition to the square and rectangular Tub-Line V shower bases, there are four models with extended Tub-Line Bol V cover rail for the replacement of bath tubs. With a length of 1800 mm there are widths of 800, 900, 1000 and 1200 mm. Due to having an area with no slope, these shower bases can be shortened both in width and in length.
